

WEBSITE AUDIT REPORT

localhost

31 checks across speed, SEO, lead conversion, security and mobile.

Grade D: underperforming

Your strongest area is mobile & accessibility (100). The biggest opportunity is security & trust (8), which is where fixes will make the most difference to enquiries.

● 7 critical ● 6 need work ● 18 passed

Scores by area

Speed & performance		72
SEO & visibility		72
Lead conversion		71
Security & trust		8
Mobile & accessibility		100

Fix these first

- Secure connection (HTTPS)**
Your site loads over plain HTTP. Browsers label it "Not secure".
- Security headers**
0 of 5 recommended security headers are set. Missing: Strict-Transport-Security, X-Content-Type-Options, X-Frame-Options, Content-Security-Policy, Referrer-Policy.
- Meta description**
There is no meta description.
- Image alt text**
13 of 15 images are missing alt text.

Speed & performance

72/100

1 critical, 1 need work, 4 passed

Critical	Text compression Pages are sent without Gzip or Brotli compression. Why it matters Uncompressed pages are often 3 to 5 times larger, which is especially slow on mobile data. How to fix Turn on Gzip or Brotli in your hosting panel, caching plugin or Cloudflare.
Needs work	Page code size The HTML alone is 156 KB, which is heavy. Why it matters Bloated page code (common with page builders) takes longer to download and process on phones. How to fix Remove unused sections and widgets, and avoid inline CSS and SVG where possible.
Passed	Server response time Your homepage HTML downloaded in 0.31 seconds.
Passed	Script and style files 3 JavaScript and 3 CSS files load on the homepage.
Passed	Render-blocking scripts 0 script(s) block the page from rendering.
Passed	Image lazy loading 12 of 15 images are lazy loaded.

How Vyntic Studio can help

We can fix the 2 issues in this section for you. See how our website speed optimization service works, with a fixed price before any work starts.

[Website speed optimization ->](#)

SEO & visibility

72/100

3 critical, 1 need work, 9 passed

Critical

Meta description

There is no meta description.

Why it matters This is the sales text under your link in Google. Without it, Google shows random page text and fewer people click.

How to fix Write a 120 to 155 character description with a clear benefit and call to action.

Critical

Image alt text

13 of 15 images are missing alt text.

Why it matters Alt text lets your images appear in Google Images and makes the site usable for people with screen readers.

How to fix Add short, descriptive alt text to every meaningful image in the media library.

Critical

Social sharing preview

No Open Graph tags were found.

Why it matters When someone shares your link on WhatsApp, LinkedIn or Facebook, it shows a blank or random preview that few people click.

How to fix Set og:title, og:description and a 1200x630 og:image.

Needs work

Page title

Your title is 13 characters: "Vyntic Studio". The ideal range is 30 to 65.

Why it matters A short title wastes space you could use for keywords people search for.

How to fix Rewrite the title to 50 to 60 characters with your main service first.

Passed

Search engine indexing

Search engines are allowed to index your homepage.

Passed

Main heading (H1)

One clear H1: "Websites that rank on Google get cited by AI win customers".

Passed

Structured data (schema)

Structured data is present, helping Google and AI assistants understand your business.

Passed

XML sitemap

An XML sitemap was found, so Google can discover all your pages.

Passed

Content structure

19 H2 subheadings organise the page.

Passed

Canonical URL

A canonical URL is set to prevent duplicate content.

Passed

Language declared

The page language is declared (en-US).

Passed

Amount of content

About 2584 words of content on the homepage.

Passed

robots.txt

robots.txt is present and allows crawling.

How Vyntic Studio can help

We can fix the 4 issues in this section for you. See how our seo services service works, with a fixed price before any work starts.

SEO services ->

Lead conversion

71/100

1 critical, 3 need work, 3 passed

Critical**Visitor and lead tracking**

No common analytics tool (Google Analytics, Tag Manager, Meta Pixel, Microsoft Clarity, Hotjar) was detected.

Why it matters You cannot see how many people visit, where they come from, or which pages bring leads, so marketing spend is guesswork.

How to fix Install Google Analytics 4 (via Site Kit or Tag Manager) and set up form-submission conversions.

Needs work**Tap-to-call phone link**

No tap-to-call phone link was found.

Why it matters High-intent mobile visitors often prefer to call. Without a clickable number, many will not copy it by hand.

How to fix Add your phone number as a tel: link in the header and contact section.

Needs work**Instant contact (WhatsApp or chat)**

No WhatsApp button or live chat was found.

Why it matters Many visitors will not fill in a form but will send a quick message. Instant chat captures leads that would otherwise leave.

How to fix Add a WhatsApp click-to-chat button or a free live chat tool.

Needs work**Privacy policy**

No privacy policy link was found.

Why it matters Visitors are more hesitant to submit details, and collecting data without a policy can breach GDPR and other privacy laws.

How to fix Publish a privacy policy and link it in the footer and next to your forms.

Passed**Lead capture form**

Visitors can contact you or book directly from the homepage.

Passed**Calls to action**

14 clear calls to action (like "Contact" or "Get a quote") guide visitors.

Passed**Social proof**

The page shows trust signals such as reviews, testimonials or case studies.

How Vyntic Studio can help

We can fix the 4 issues in this section for you. See how our website design service works, with a fixed price before any work starts.

Website design ->

Security & trust

8/100

2 critical, 1 need work, 0 passed

Critical**Secure connection (HTTPS)**

Your site loads over plain HTTP. Browsers label it "Not secure".

Why it matters Visitors see a warning next to your address and many leave before filling in a form. Google also ranks HTTPS sites higher.

How to fix Install a free SSL certificate (Let's Encrypt or Cloudflare) and force all traffic to HTTPS.

Critical**Security headers**

0 of 5 recommended security headers are set. Missing: Strict-Transport-Security, X-Content-Type-Options, X-Frame-Options, Content-Security-Policy, Referrer-Policy.

Why it matters Without these headers your site is easier to embed in phishing pages, hijack with injected scripts, or downgrade to an insecure connection.

How to fix Add the missing headers in your server config, a security plugin, or Cloudflare Transform Rules.

Needs work**Software versions exposed**

Your site publicly reveals software versions: X-Powered-By: PHP/8.4.19.

Why it matters Attackers scan for exact versions with known vulnerabilities, so this makes your site an easier target.

How to fix Hide the generator tag and X-Powered-By header, and keep core, themes and plugins updated.

How Vyntic Studio can help

We can fix the 3 issues in this section for you. See how our website care plans service works, with a fixed price before any work starts.

Website care plans ->

Mobile & accessibility

100/100

0 critical, 0 need work, 2 passed

Passed

Mobile-friendly layout

The page is set up to adapt to phone screens.

Passed

Site icon

A site icon (favicon) is set for browser tabs and home screens.
